The AP series of reports is issued by the Environmental Protection Agency to report the results of scientific and engineering studies, and information of general interest in the field of air pollution. Information presented in this series includes coverage of intramural activities involving air pollution research and control technology and of cooperative programs and studies conducted in conjunction with state and local agencies, research institutes, and industrial organizations. Copies of AP reports are available free of charge - as supplies permit - from the Office of Technical Information and Publications, Office of Air Programs, Environmental Protection Agency, Research Triangle Park, North Carolina 27711.

Office of Air Programs Publication No. AP-102

FEDERAL AIR QUALITY CONTROL REGIONS

INTRODUCTION

The United States recognizes the threat of air pollution to both health and welfare, and since 1963, the country has had a Federal program for controlling it, the Clean Air Act of 1963 (42 USC 1872 et seq.). In 1967 Congress passed an Amendment to the Act that provided for a system that would handle the abatement, prevention, and control of air pollution on a regional basis. This system now involves the coordinated efforts of Federal, state, and local governments. The role of the Federal Government is to provide leadership and to encourage and assist with the development and operation of the regional air pollution control programs. These regional programs were initiated in any geographical area, without regard for state boundary lines, that endured common air pollution problems. The abatement, prevention, and control of air pollution at the sources is primarily the responsibility of the state and local governments in the respective regions.

The 1967 Amendment directed the Federal Government to designate Air Quality Control Regions throughout the Nation; Section 107 (a)(2) directed the Secretary of the Department of Health, Education, and Welfare (DHEW) to "...designate Air Quality Control Regions based on jurisdictional boundaries, urban-industrial concentrations, and other factors, including atmospheric areas, necessary to provide adequate implementation of air quality standards." The designation process involved the appropriate officials and the local citizens of the proposed regions in boundary-setting activities coordinated by members of the Federal air pollution control program. An initial notice in the Federal Register established the time and place for a consultation among the appropriate officials in the jurisdictions represented in a proposed region. After the consultation, citizens' comments were weighed and the boundaries decided upon. Once approved by the Secretary these boundaries appeared in the Federal Register and the region was officially designated. In June

1968 the Secretary named 32 urban areas, where pollution levels were high, for designation as Federal Air Quality Control Regions (AQCR's). He announced an additional 25 areas in March 1969. Together the two sets included portions of all 50 states, the District of Columbia, Puerto Rico, and the Virgin Islands. Region names were chosen to correspond to local designations, geographic areas, major cities in the region, or state requests. Designation of the initial 32 regions was completed on April 24, 1970, and of the second 25, on November 10, 1970. In his Environmental Message to Congress on February 10, 1970, President Nixon ordered that the process of designating interstate regions be accelerated; thus on April 5, 1970, 34 additional interstate areas were announced for designation by the end of 1970. That addition extended Federal Air Quality Control Region coverage to all of the high-pollution centers, but not to all of the territorial area in the Nation.

During the summer of 1970 many states requested that all of their respective territories be included in Federal AQCR's. Most recommended that the boundaries be drawn to include relatively large segments of their state, and many recommended that the regions coincide with administrative regions already defined by the states themselves. At present, for certain administrative purposes, each of the state AQCR's does function within one of the ten regional offices of the Environmental Protection Agency (EPA).

EPA was created on December 2, 1970, to administer programs for air, water, solid waste, radiation, and pesticide pollution control, absorbing these functions from other departments and agencies.

On December 31, 1970, President Nixon signed into law the Clean Air Amendments of 1970. These Amendments allowed the Administrator of the Environmental Protection Agency 90 days to complete designation of any interstate area or "major" intrastate area that he deemed necessary or appropriate for the attainment and maintenance of ambient air quality standards. Additional regions were thus designated throughout the Nation to bring the total number of Air Quality Control Regions to 235. After the 90-day statutory requirement, remaining areas in 10 states and 2 territories automatically became regions by operation of the 1970 law. To date, 247 Air Quality Control Regions have been established.

In addition to designating regions, the EPA Administrator is also required by the Act to publish air quality criteria for pollutants that are acknowledged as harmful to health or welfare, and he is required to publish reports on the techniques that can be employed to control these pollutants. The 1970 Amendments authorize the Administrator to promulgate national primary and secondary ambient air quality standards. Primary standards are set to protect the health, and secondary standards to protect public welfare from any known or anticipated adverse effects of a pollutant. Pollutants for which air quality criteria have already been issued must, by law, be defined by national primary and secondary ambient air quality standards by April 30, 1971. These pollutants include sulfur oxides, particulate matter, hydrocarbons, carbon monoxide, photochemical oxidants, and nitrogen oxides.

Once the standards have been set, the 1970 Amendments require the states to hold legal hearings to adopt plans for implementing them. In some cases the hearings require cooperation among as many as four states.

The implementation plans adopted must be submitted to the Administrator within 9 months after the promulgation of the standards, and must provide for the attainment of primary air quality standards within 3 years after the Administrator approves of them. They must also provide for the attainment of secondary standards within a reasonable length of time.

Federal Air Quality Control Regions are officially designated in Title 40, Part 81, of the Code of Federal Regulations. This document, Federal Air Quality Control Regions, is an expansion of the information presented in the Code of Federal Regulations. Maps and outlines in this report describe all of the Air Quality Control Regions presently designated in the 50 states, the District of Columbia, Guam, American Samoa, Puerto Rico, and the U.S. Virgin Islands. A tabular summary of types (interstate, intrastate, or remaining area) and number of Air Quality Control Regions in each state or territory appears first, followed by a map of all the states and territories with regional boundaries delineated. Shading on the map distinguishes the types of regions.

Next is a directory of the EPA Regional Offices. This precedes the maps of each of the ten EPA regions, which indicate the boundaries of the Air Quality Control Regions within each of them. A shading scheme, similar to the one on the United States map, is used to distinguish the three types of Air Quality Control Regions.

The final section describes, in alphabetical order, each of the 50 states and the District of Columbia, showing boundaries of the Air Quality Control Regions affecting them. Each description is composed of a map of the state and a complete list of the local jurisdictions included in each AQCR in it, both inter- and intrastate. Maps of American Samoa, Guam, Puerto Rico, and the United States Virgin Islands are also included.
